Course Overview

—
Clyde Dapat, PhD
WHO Collaborating Centre for Reference
and Research on Influenza

**CENTRE FOR
PATHOGEN
GENOMICS**

**Doherty
Institute**

THE UNIVERSITY OF
MELBOURNE

**The Royal
Melbourne
Hospital**

A joint venture between The University of Melbourne and The Royal Melbourne Hospital

Motivation

- SARS-CoV-2 and influenza virus pose significant public health threats
- Timely detection and monitoring are important in mitigating the spread of pathogens
- Capacity for bioinformatics analysis of influenza and other respiratory viruses at national and regional laboratories remains limited.
- Pressing need for training and capacity building for NGS data analysis

Learning outcomes

Upon completion of the course, participants will be able to:

- Perform whole-genome assembly
- Evaluate the quality control of NGS data and consensus sequences
- Identify variants and detect mutations
- Perform phylogenetic analysis
- Submit sequence to genetic database

Course content

- SARS-CoV-2 and influenza overview
- Introduction to NGS data analysis
- Quality control of NGS data and consensus sequences
- Principles of genome assembly
- Identify variants and detect mutations
- Phylogenetic analysis
- Data sharing to genetic databases

Case study

- Participants will receive 10 sequence data of flu viruses collected from the Philippines
- Analyze and interpret results

Extra assignment

- Pipeline development
